

11th International Clinical Skills Conference 2027

Sunday May 16th – Wednesday May 19th , 2027

Interfaces and Impacts

Dr Lise Brogaard -Plenary Summary

(With Professor Tanja Manser Psychology at FHNW Switzerland)

Plenary Title: Behavioural Science for Excellence in Interprofessional Emergency Teams

Plenary Description: Our research focuses on the analysis of clinical performance in interprofessional teams during real-life obstetric emergencies. Different emergencies require different non-technical skills to achieve excellent clinical performance. These differences reflect specific task demands, team roles, and the importance of patient collaboration. Understanding which non-technical skills matter most – and when – has important implications for how we train, debrief, and support clinical teams.

Dr Lise Brogaard -Keynote Workshop Summary

(With Professor Tanja Manser Psychology at FHNW Switzerland)

Workshop Title: Using Live Video to Improve Clinical Performance

Workshop Description: This interactive workshop explores how video recordings can provide unique insights into team performance during real-life emergencies and how these insights can be used for educational purposes. Drawing on our experience of implementing video recording in clinical practice, we will demonstrate how video can support the assessment of both clinical and non-technical performance, as well as structured clinical debriefing. Participants will explore how video-based insights can be translated into learning and meaningful improvements in clinical practice.
